

Colour Management Viewing Station 150

Ever wondered how you can get the correct viewing conditions for the most accurate colour match when there's no space for a separate colour assessment room in your company or you work in an open plan office?! Well Verivide has the answer- the Colour Management Viewing Station.

The Viewing station contains a Colour Assessment Cabinet, as per the VeriVide CAC 150, which can accommodate in standard form up to five light sources. Including the VeriVide D65, which creates the perfect alternative to natural daylight, calculated to the CIE 51 standard and is the best fluorescent D65 stimulator in its class.

The CMVS 150 allows for a wide range of samples to be viewed. The retractable hood and curtain eliminate ambient lighting, and external colour interference, creating the perfect conditions for viewing colour samples and allowing consistency through out the product chain. It also provides controlled standardised Lighting which comes in a variety of illuminants such a, CIE standard daylights, Point of Sale, Tungsten Filament and Ultra Violet.

The viewing station incorporates VeriVide's digital control panel, allowing the user access to a wide variety of features and can incorporate a very accurate dimming control which can be locked to prevent unwanted adjustment.

A perfect way to overcome the problem of 'lack of space' and ensure you achieve the most accurate viewing conditions, every time.
